## Did You Know what is 'POSTMAN'?

 POSTMAN IS A TOOL THAT ALLOWS DEVELOPERS TO TEST AND DEBUG **APIS (APPLICATION** PROGRAMMING INTERFACES). APIS ARE A WAY FOR DIFFERENT SOFTWARE SYSTEMS TO COMMUNICATE WITH EACH OTHER **OVER THE INTERNET. THEY ALLOW** DEVELOPERS TO ACCESS DATA AND FUNCTIONALITY FROM OTHER SYSTEMS IN A STANDARDIZED WAY.

 POSTMAN IS PARTICULARLY USEFUL FOR TESTING REST (REPRESENTATIONAL STATE TRANSFER) APIS, WHICH ARE A TYPE OF API THAT FOLLOWS CERTAIN ARCHITECTURAL PRINCIPLES. REST APIS USE HTTP REQUESTS TO SEND AND RECEIVE DATA, AND THEY ARE DESIGNED TO BE EASY TO USE AND FLEXIBLE.

 WITH POSTMAN, DEVELOPERS CAN SEND HTTP **REQUESTS TO AN API AND** SEE THE RESPONSE THAT THE API SENDS BACK, THIS IS USFFUL FOR VERIFYING THAT AN API IS WORKING CORRECTLY AND FOR TROUBLESHOOTING ANY ISSUES THAT MAY ARISE.

 POSTMAN HAS A NUMBER OF OTHER FEATURES THAT MAKE IT A USEFUL TOOL FOR DEVELOPERS. FOR EXAMPLE, IT ALLOWS YOU TO SAVE AND **ORGANIZE YOUR API** REQUESTS, RUN AUTOMATED TESTS, AND EVEN GENERATE **CODE SNIPPETS FOR** DIFFERENT PROGRAMMING I ANGUAGES.

 IN ADDITION TO TESTING AND DEBUGGING APIS, POSTMAN CAN ALSO BE USED FOR API DOCUMENTATION AND FOR COLLABORATION WITH OTHER DEVELOPERS, IT HAS BUILT-IN DOCUMENTATION TOOLS THAT ALLOW DEVELOPERS TO EASILY CREATE AND SHARE DOCUMENTATION FOR AN API.
